Work sample: developer.alianza.com, the developer portal I built and operated for Alianza

PROFESSIONAL SUMMARY

Product manager with 13 years in product management, 11 on developer platforms, APIs, and SDKs. Most recently owned the developer-facing surface of Alianza's Crux (1.0.0, September 2026), the connectivity layer through which AI agents get governed access to live phone calls on 1,000+ operators' networks, with identity, policy, and consent applied before an agent acts: built developer.alianza.com, built the MCP server prototype for the API, reviewed, critiqued, and proposed APIs, and jointly set the API standards engineering teams built against. Owned client SDKs across eight operating systems at Vonage and shipped the VoiceBase v3 API and SDKs that cut support tickets 40%. Led Enhanced Number Verification with mobile operators and handset manufacturers, and built network APIs with Ericsson for hundreds of operators. Works directly with code when it is the fastest way to validate an integration, and builds with Claude Code daily.

AREAS OF EXPERTISE

Developer Platforms, APIs & SDKs | Agent Connectivity (MCP) | Identity & Authorization in the API Contract | Connector Ecosystems Across Operators | Developer & Operator Experience | Customer Discovery & Field Enablement

PROFESSIONAL EXPERIENCE

Principal Product Manager, APIs & Developer Platforms

Jan 2026 – Nov 2026

Alianza • Remote

Owned the developer-facing surface of Crux, the control plane through which AI experiences get governed access to live phone calls and voice data on 1,000+ operators' networks: public API, events and webhooks, and developer.alianza.com. Crux applies identity, policy, and consent in the network before any AI is invoked, then hands the call to a virtual agent or streams media to a post-call partner. Joined after the platform was designed; shipped the 1.0 developer experience in September 2026.

- Designed and operated the AI-built documentation system behind the portal: agents generate reference docs and code samples from the API definition, humans review, and the system reports where the definition leaves a gap instead of filling it in
- Built developer.alianza.com, where developers learn the platform's access model (Experience, Connection, Assignment), run eligibility, connection, assignment, and activation to a live call in about ten minutes, and find the authentication guide (OAuth 2.0 grants, scoped permissions, key rotation) they integrate against; published the platform guarantees partners build against (webhooks with at-least-once delivery, RFC 9457 errors with trace IDs)
- Reviewed, critiqued, and proposed APIs, keeping Architecture in the loop; helped guide the structure of the Crux API and jointly set the API standards engineering teams built against (RFC 9457 errors with trace IDs, cursor pagination, E.164 and UUID identifiers, deprecation paths for the `tn` parameter and the `CONNECTED` state)
- Built the MCP server prototype for the Crux API so coding agents could discover and call it directly; prototyped against the API myself to validate the integration path before handing it to engineering
- The developer surface served three audiences at once: third-party AI experience providers, the operators whose networks carry the calls, and Alianza's own provisioning systems; the standards and documentation system were built once so each new experience provider connected without bespoke Alianza-side work
- Published the operational runbooks operators and partners rely on in production (webhook desynchronization recovery, seed-then-stream user counting) and a known-issues page that names real failure modes; coordinated the 1.0 launch across engineering, operations, and go-to-market, with experience providers integrating in sandbox during early access, and enabled the field with messaging and demos

Lead Product Manager

Apr 2025 – Jan 2026

Charter Communications • Denver, CO (Hybrid)

- Built the developer platform and programmable network APIs for North America's largest ISP by subscribers; defined product strategy for CAMARA network APIs exposing network identity to third-party developers under customer-consent and privacy constraints
- Partnered with engineering and architecture through an ambiguous, early-stage program with dependencies across network, billing, and legal organizations

Expert Product Manager, Ericsson Global Network API Platform

May 2024 – Jan 2025

Vonage / Ericsson • Remote

- Led Enhanced Number Verification: the CAMARA identity-verification API was already commercial but limited, and overcame those limits by working with mobile operators and handset manufacturers; united a multi-company team across Vonage, Ericsson, and operators
- On the team delivering a single unified API platform for third parties to interact with hundreds of mobile network operators globally; presented the API strategy at Ericsson Innovation Days to European operators

Senior, then Expert Product Manager, Video API Platform

Apr 2020 – May 2024

Vonage • San Francisco, CA, then Remote

- Lead PM for a multi-tenant WebRTC platform used by Vonage's first-party apps, direct API customers, and third-party developers; owned client SDKs across 8 platforms (iOS, Android, Web, Windows, Mac, Linux and more), balancing SDK ergonomics against platform reliability
- Hired to steer the platform through 650% telehealth growth in the first six weeks of the pandemic and 850% growth for 2020, maintaining reliability through 10x scale
- Conceived and shipped Video Express, a 0-to-1 simplified video SDK: prototype-validated with customers, beta in under 3 months, GA in under 9, running 10% of the platform's 2019 minutes within a year
- Drove $3M revenue capture in 6 months through take-share campaigns that moved developers from competing platforms onto Vonage after market events; first of 5 PMs hired into the Video group, onboarded and oriented the other four, set up the structures for coordinating work and prioritizing across the team, and created the group's PM process, later adopted as a company-wide framework
- Recipient: Key Talent Award and Key Contributor Award

Senior Product Manager, SendGrid Labs

Aug 2018 – Jan 2020

Twilio • San Francisco Bay Area

- Directed SendGrid's transition from email API to multi-channel communications platform through strategic roadmap development, including M&A proposals; practiced Outcome-Driven Innovation discovery

Senior Product Manager

2017 – 2018

VoiceBase • San Francisco, CA

- Shipped the v3 REST API, SDKs, and self-service Developer Console for an AI speech-to-text platform, bringing the AI capability to customers through the API; reduced support tickets 40%; built product demos and sales enablement for the field
- Product depended on integrating with other companies' telephone networks, so owned the partner side of access and provisioning; company acquired by LivePerson

Product Manager, API Platform & Developer Ecosystem

2015 – 2017

Aerohive Networks • Sunnyvale, CA

- Product manager for the API platform and developer ecosystem of an enterprise WiFi company: built sample apps, created videos for the developer community, wrote docs, and gave feedback on the Identity, Location, and Configuration APIs
- Co-invented 2 patents for credential management and seamless device onboarding; led HiveSchool WebRTC product, ISTE "Best in Show"

Product Manager

2013 – 2015

Yahoo • Sunnyvale, CA

- Managed Mail Monetization and ad-targeting products for Yahoo's consumer user base; recipient of Superstar Team Award

CERTIFICATIONS, PATENTS & WRITING

- Certified Scrum Product Owner (CSPO) – Scrum Alliance
- Patents 15/073,593 (Credential Management) and 62/350,158 (Seamless Device Onboarding)
- LinkedIn articles on AI-assisted product discovery, ODI/JTBD, and the Video Express build (2025–2026); daily Claude Code user who builds with AI assistance

EDUCATION

University of California, San Diego — B.S. in Management Science, Department of Economics (Econometric Regression Modeling Honor Program; coursework in Java, C++, x86 Assembly)

University of California, Berkeley Extension — High Tech Product Marketing & Management
