Dear Teladoc Health Hiring Team,

In the spring of 2020 I was the lead product manager for the video platform that Teladoc visits ran on. Vonage's video API carried telehealth through 650% growth in the first six weeks of the pandemic and 10x for the year, and keeping it reliable while patients and clinicians depended on it is the formative experience of my career. I would like to work on the member side of that experience now.

I should say plainly what I am and am not. I have not owned a consumer product at a company like Teladoc. I have spent eleven years owning the platforms beneath consumer experiences at scale, and the parts of this role that are about systems thinking, design partnership, evidence, and hard tradeoffs are the parts I have done. At Vonage, when lockdown-era customers moved from 2-4 party calls to 25-100 party sessions, I conceived Video Express, validated it with a lean prototype and customer interviews, shipped beta in under three months and GA in under nine, and within a year it ran 10% of the session minutes the whole platform had run in 2019. At Alianza I own the developer-facing surface of Crux, the control plane through which AI companies get governed access to live phone calls on more than a thousand operators' networks; consent, identity, and policy are applied before any AI touches a call, and I own the surface the people building on it work from. At Yahoo I managed Mail Monetization and ad-targeting products for a consumer user base, which is where I learned to argue with a metric that does not capture what people feel.

On method: I practice Outcome-Driven Innovation, learned at SendGrid Labs, including survey design and K-means clustering of customer outcomes to rank what to build, and I now use AI agents to prepare for and synthesize customer and developer discovery interviews. I have written publicly about where AI systems should and should not be trusted, which is the question your AI-powered intake and personalization will keep asking.

The posting says you are the person pointed at a complex, high-priority problem to chase down end to end. That is how I have worked in every role, and I would welcome a conversation about which problem is first.
