Dear Wheel Hiring Team,

In spring 2020 I was the lead product manager for the Vonage video platform that carried telehealth visits for several of the largest telehealth providers through 650% telehealth growth in six weeks and 10x for the year. Patients never saw Vonage's name; they saw their provider's. Most of my career has been on platforms like that, where the end user, the integrating developer, and the paying customer are three different parties.

I have not owned a consumer product at a healthcare company, and my AI product work is a documentation system in production, not a patient-facing feature. I want to be upfront about both. What I bring is eleven years on the systems side. At Alianza, through November 2026, I owned the developer-facing surface of Crux, the control plane that gives AI companies governed access to live phone calls on more than a thousand operators' networks. Operators keep the customer relationship and offer the experiences under revenue-share, referral, or white-label models. Consent, identity, and policy are applied in the network before any AI touches a call. I built the portal those AI companies integrate from, including an MCP server prototype so coding agents could work against the API, and I reviewed, critiqued, and proposed APIs, keeping Architecture in the loop. Your posting asks where the patient experience should be standardized across partners and where it should be configured per partner. I spent this year on that same question for operators and AI providers.

I designed and operated the AI-built documentation system behind developer.alianza.com. Agents generate the reference and code samples from the API definition, humans review them, and the system reports where the definition leaves a gap instead of filling it in. Deciding where the system is trusted and where a person stays in the loop is the tradeoff your intake and triage work will keep making, and I have written publicly about it.

I practice Outcome-Driven Innovation, learned at SendGrid Labs, and use AI agents to prepare for and synthesize customer and developer discovery interviews. When lockdown-era customers moved from 2-4 party calls to 25-100 party sessions, that discipline produced Video Express: prototype, customer interviews, beta in under three months, GA in under nine, and 10% of the platform's 2019 minutes within a year.

My role at Alianza ended in November, so I am available now. I would welcome a conversation about which partner's front door you would start with.
